

ABSTRACT

A communication service information providing method is comprised the step of storing both a plurality of communication services which are subscribed to by a subscriber and are made of plural sorts of information representation media, and identification information capable of selectively utilizing the communication services so as to establish a communication, and the step of notifying both the communication service subscribed to by a subscriber that wants to establish a communication, and the identification information corresponding to the communication service to a calling terminal in response to a request issued from the calling terminal. With employment of this structural step, it can acquire and/or confirm both the communication service subscribed to by the subscriber or the communication counter party and the identification information, or the identifier corresponding to this communication service.
